OBJECTIVE

I am a web developer. I have an understanding of javascript and react concepts, and a basic idea of express, MongoDB. I have several projects with React and 3 projects with MERN. Currently, I want to work with React Js. But interested in working with the MERN stack in the future.

PROJECTS

Donation Campaign web-app

Demo   Code-link
Technology: React Js/ CSS/ Tailwind

1. Here are different categories related to donation.
2. Clicking on a specific category will show detailed information about that category.
3. Users can donate if they want.
4. Users can see the amount of his/her donation.

Newsportal web-app

Demo   Client-side   Server-side
Technology: React Js/ CSS/ Tailwind/ Express/ MongoDB

1. Create an admin panel.
2. All Users Page: This page shows all the users with the following information name, email, profile picture, and Make admin button in tabular format.
3. Add Publisher Page: Add a simple form here to add publishers to your website.

Tech Brand web-app

Demo   Client-side   Server-side
Technology: React Js/ CSS/ Tailwind/ Express/ MongoDB

1. There are some specific brand products, each product has an update and a details button. When clicking the details button user sees detailed information on the single product.
2. When the user clicks the update button user is redirected to the update page, The user can update this product using a form.
